Heat Event Briefing

The California State Warning Center (CSWC) is coordinating with the National Weather Service Western Region Headquarters Regional Operations Center and Cal ISO in order to closely monitor the potential impacts due to the widespread elevated temperatures across the state. Due to the prolonged hot temperatures across California, the CSWC sent a Heat Event briefing to stakeholders throughout the state regarding the current heat conditions. The CSWC will continue to monitor and send updates throughout this heat event.

WEATHER OF CONCERN

Weather of Concern

- Minor cooling can be expected today and Wednesday, statewide, before temperatures heat back up on Thursday. Through Labor Day weekend, very hot daytime temperatures are anticipated with little relief overnight.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Unseasonably hot and very dry, poor overnight relative humidity (RH) recovery for the next week. Dry with breezy afternoons eastern PSAs Tuesday and Wednesday afternoons. Strong high pressure over Northern California through Tuesday will be weakened somewhat by a low pressure trough sweeping eastward Wednesday into Thursday. Very strong high pressure will return late Thursday and gain strength over Northern California Friday as it moves east and becomes established over the Great Basin Saturday. There may be a few later afternoon through overnight thunderstorms develop Tuesday and early Wednesday near Tahoe as the trough approaches, otherwise dry weather will prevail well into the weekend at least. Gusty afternoon southwest winds are expected to develop over our eastern areas (peak gusts mostly around 25-28 mph) and generate some areas of very low afternoon RH with that (5-12%).

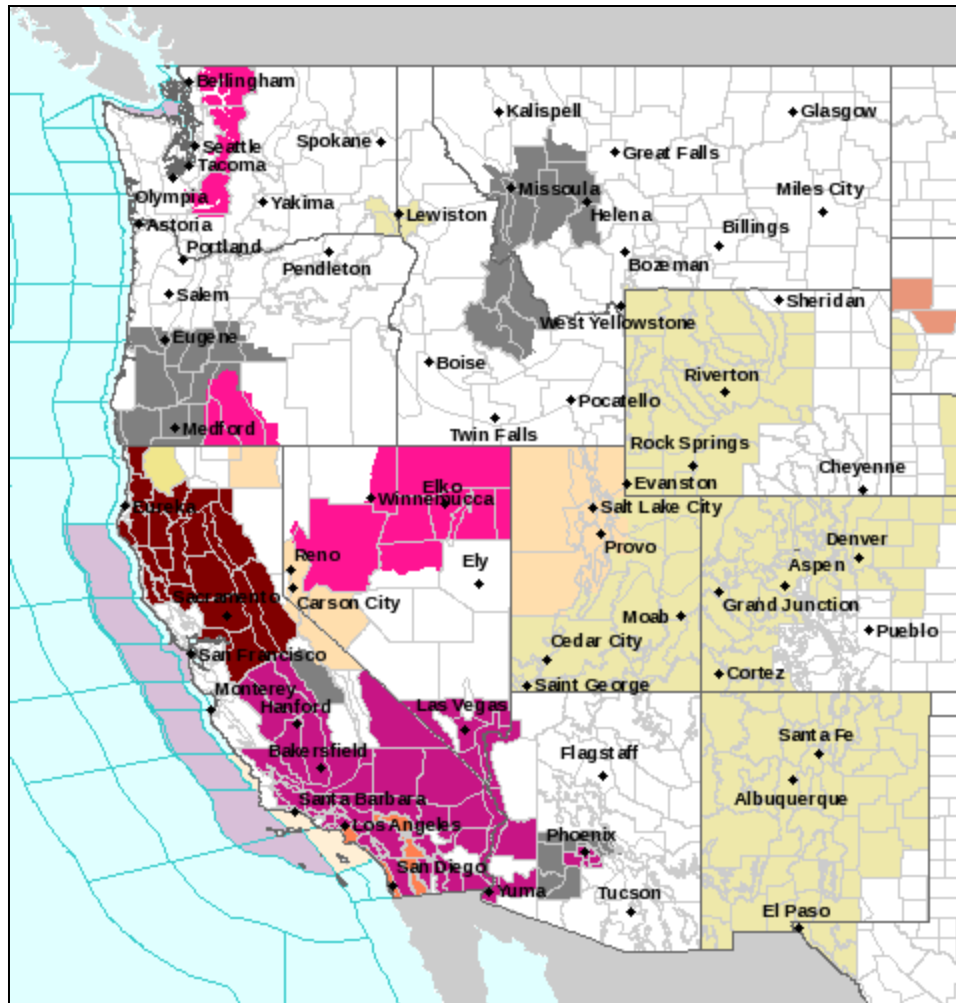

Very hot and dry conditions with poor overnight RH recovery (to 20-30%) will be common much of this week on mid and upper slopes. Afternoon temperatures will be 10-15 degrees above normal with afternoon RH dropping to 5-15%. The warmest inland valleys will continue to see highs of 105-110 into early next week. There may be some moisture wrap around the western side of the Great Basin high late this weekend for some afternoon and evening mountain thunderstorms to develop, but confidence in that developing is very low at this time.

The stable conditions under the strong high will not help air quality improve and may further degrade it, especially in valleys and canyons near active fires. The marine layer will be shallow and only areas along the immediate coast will get relief from the very hot temperatures.

SOUTHERN CALIFORNIA

Hot and dry through this weekend. Strong high pressure over the Great Basin will bring record or near record heat along with low humidity to the region through this weekend. Maximum temperatures will be in the upper 80s and 90s across the mountains and between 100 and 112 in the valleys. Minimum humidity will be mainly in the teens. Isolated showers and thunderstorms will form over the mountains and deserts mainly during the afternoon hours through this weekend. There will be strong and erratic winds in and near any thunderstorms, otherwise winds will be light through this weekend.
